

Rotary Transfer Forming System

High Demand Industries

- Cut
- End Form
- Bend Over a Mandrel

- Ease of Use
- Labor Savings
- American Made
- Compact Footprint

• Streamline your tube forming process with an all-in-one system that pulls from a level wound spool, straightens, cuts, end forms, bends over mandrel, and offloads – **dramatically reducing the number of operators needed to produce your parts.**

• Compact Footprint: Optimize your production floor with a **space-saving design**, perfect for busy OEM facilities where every square foot counts.

Mandrel Bending for Precise Results:

This system allows you to bend over a mandrel, providing precise and repeatable bends while minimizing tube deformation. The result is higher-quality bends, improved consistency, and fewer rejects—ideal for demanding HVAC, Refrigeration, and other industry applications.

Flexibility for Your Production Needs:

Our advanced software provides the flexibility to bypass any operations as needed, ensuring that the Rotary Transfer Forming System adapts to your specific production requirements.
